

DURABLE PLASTIC AND WIRE UTILITY SEAL

The Mega Twister SP is a high-quality and cost-efficient sealing solution for all kinds of meters. It is also an upgraded version of the Mega Twister.

The Mega Twister SP is available in Polycarbonate or High Impact ABS material for the body with an Acetal tap in a variety of colours. The non-flammable High Impact ABS plastic provides excellent bar-coding contrast.

Typical applications for the Mega Twister SP include utility meters, scales, gasoline pumps, drums and totes.

Mega Twister SP seals are supplied in mats of five with tear-off mechanism which make the seal easy to handle and control.

MEGA TWISTER

COST-EFFECTIVE EASY APPLICATION METER SEALS

- 1] Mega Twister seals are etched with permanent laser marking. Laser marking offers the highest level of security as it cannot be removed and replaced.
- 2] The side flap area is etched with sequential numbering, logo or other customised marking for high security and easy identification.
- 3] Colour coding is possible by combinations of clear transparent body and multi-coloured twister.
- 4] Heat stacking technology is used to permanently affix the twister in the seal body. This technology will leave clear evidence of tampering if the seal is cut or forced open.
