

**THE CONVENIENT CABLE SEAL**

The SP MCL200 seals are very user-friendly and highly tamper evident. The seals are secured as soon as the wire has passed through the one-way locking mechanism. To maximize security and to prevent tampering the wire must be adjusted to fit tightly to the application.

The SP MCL200 seals are widely used on trucks, tanker trucks, air cargo containers, shipping containers, rail cars, calibrators and valves.

**COST-EFFECTIVE CABLE LOCKING SEAL FOR TRANSPORT APPLICATIONS**

- 1] The exterior casing of the SP MCL200 seal is made of highimpact ABS plastic which provides a tough shell around the zinc diecast locking mechanism. The cover is available in various colours and is ultrasonically welded to the white base plate.
- 2] The design of the SP MCL200 seal is suited for colour coding and eases identification from a distance. The sizable surface area can be etched with permanent laser marking. Laser marking offers the highest level of security as it cannot be removed and replaced.
- 3] One end of the galvanized wire cable is permanently secured into the locking body.
- 4] The other end of the cable feeds into a one-way locking mechanism; providing fast and easy sealing.
